**Solutions For Complex  
Material Handling, Lifting &  
Rigging Challenges Across  
All Norwegian Energy  
Industries!**

## "PRODUCTS THAT MAKE A DIFFERENCE"

As a long-term service provider to Norwegian customers over many years, Safelift have developed proven experience in meeting the high standards of product innovation, integrity & safety which are fundamental market expectations.

The highest possible level of environmental protection in terms of achieving long-term product service life is just one example of the challenging selection criteria prevalent within the sourcing philosophy which Safelift incorporates in their equipment designs to meet the requirements of Norwegian industry.

This is reflected in the use of specialist non-ferrous stainless steels in a couple of items the company has recently delivered there, namely a Counterbalance Floor Crane & Swivel Castor Trolley, which are pictured below.

Engineered with 500 Kgs & 8500 Kgs SWL capacities respectively, both products meet the stringent requirements for use in an ATEX Zone 1 working area, which is a specialism that Safelift provide for the benefit of their energy market customers on a routine basis. Both items had to fulfil third party independent verification checks too.

The Counterbalance Floor Crane provided 3 different lifting positions across the different lifting heights available to the operator by means of the in-built hand-operated hydraulic system plus a high efficiency roller bearing slewing mechanism whilst multiple features & safeguards were adopted in the design to assure user safety.

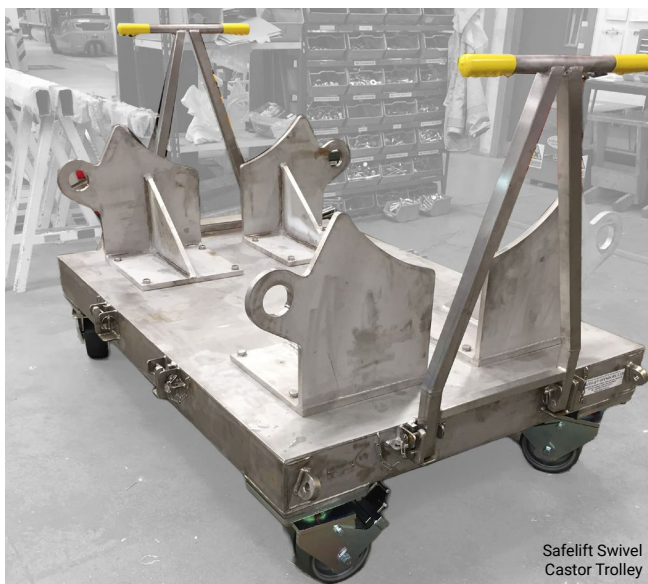

Similarly, the Swivel Castor Trolley makes use of a lifting cradle arrangement mounted on the Trolley platform to chock or support the payload being stowed & transported upon it to best ensure safe operation and the security of the load being handled.

Safelift can also point to the delivery of multiple products largely from their standard product range for inclusion within the refurbishment scopes on the Njord A floating platform & Njord B floating storage vessel during their recently completed life extension upgrades, which followed a site visit to their premises by representatives from both the Operator & Contractor to discuss best practice & assess their suitability for the applications they've been adopted for ▼

*"Having a reputable business partner with a collaborative & innovative approach to solving often very complex & specific handling, lifting or rigging equipment challenges within multiple energy industries is of key importance"* observes Hugh Ramsay, Group Sales Manager.

*"We always strive for constructive dialogue with the customer's personnel to complement their own efforts to achieve the best outcome in terms of the performance, safety & versatility of the equipment they need to utilise for a particular application or work scope",* he adds, *"And we've had very effective engagement with our customers in Norway on this basis for many years now".*

Safelift recognise the significant contemporary focus within Norwegian industry being driven by societal objectives as a whole to adopt commercial scale "clean tech" renewable or sustainable energy technologies at pace and look forward to supporting such ambitions whilst seeing the role which more conventional means of energy production will continue to play in ensuring the nation's economic prosperity & energy security for some time to come underpinning their contact & relationships with both existing & new customers alike.

*"As a well-established service provider to a diverse customer base operating in all segments of Norway's highly progressive energy industries, Safelift anticipates significant new opportunities for collaborative business initiatives based upon our singular focus of achieving excellence in innovative mechanical handling solutions".*
