Safelift Roller Floor Containers

Model > **SOLSRF**

The Safelift Roller Floor Container has been designed and developed in response to safety concerns over the high risk nature of manual handling heavy loads in enclosed containers. The container and its associated Bunded Drum and IBC lifting frames provide the ultimate solution to minimise the risks associated with the movement, manual handling and transportation of loads and hazardous substances in enclosed containers.

The Safelift Roller Floor Container is loaded like any other container when onshore, however once offshore it can be easily unloaded by crane using the inbuilt and manually operated wind out floor section, which has a SWL of 3.5TE.

SWL: 3500kg

Loaded as normal
Onshore

Integrated Tie-Down
Points and Guide Rails

Simple Manual
Operation

- **DNV2.7-1 Container**
- **3500kg SWL**
- **Loaded Onshore as normal by forklift or crane**
- **Load secured with internal tie-down points**
- **Manually operated wind out floor section for safe unloading offshore by crane**
- **Can be used in conjunction with any bunded IBC and Drum frame**
- **Available to hire Adhoc or Long Term**
